ABOUT US

Lambabros is an innovative and purpose driven brand that uses the power of technology to create more value for its clients/partners/product users.

VISION

To build one of the world's most impactful brands that is designed to add value to other brands with the aid of technology.

COMPANY MISSION

Using the law of supply and demand to incentivize every trade powered by blockchain technology.

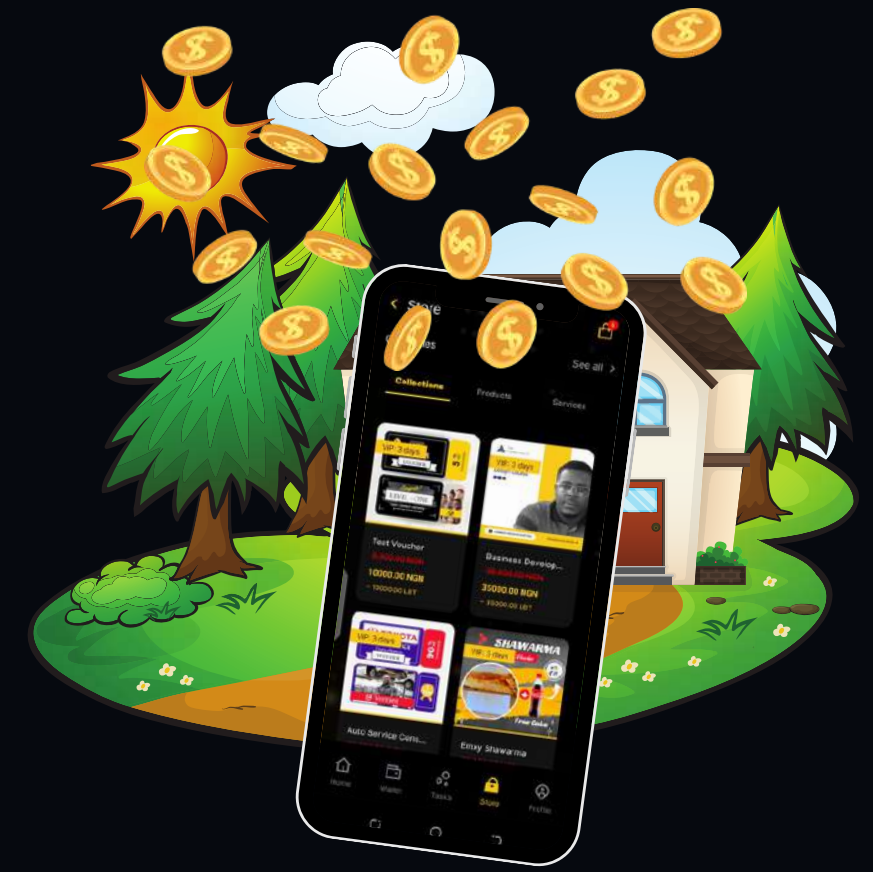

Activation

Deploying Lambatoken on the Bsc Smart Contract

Expansion and Collaboration

We Partner with other brands to introduce our tokens as incentives to encourage and build consumers buying rate affected by inflation.

Tokenization

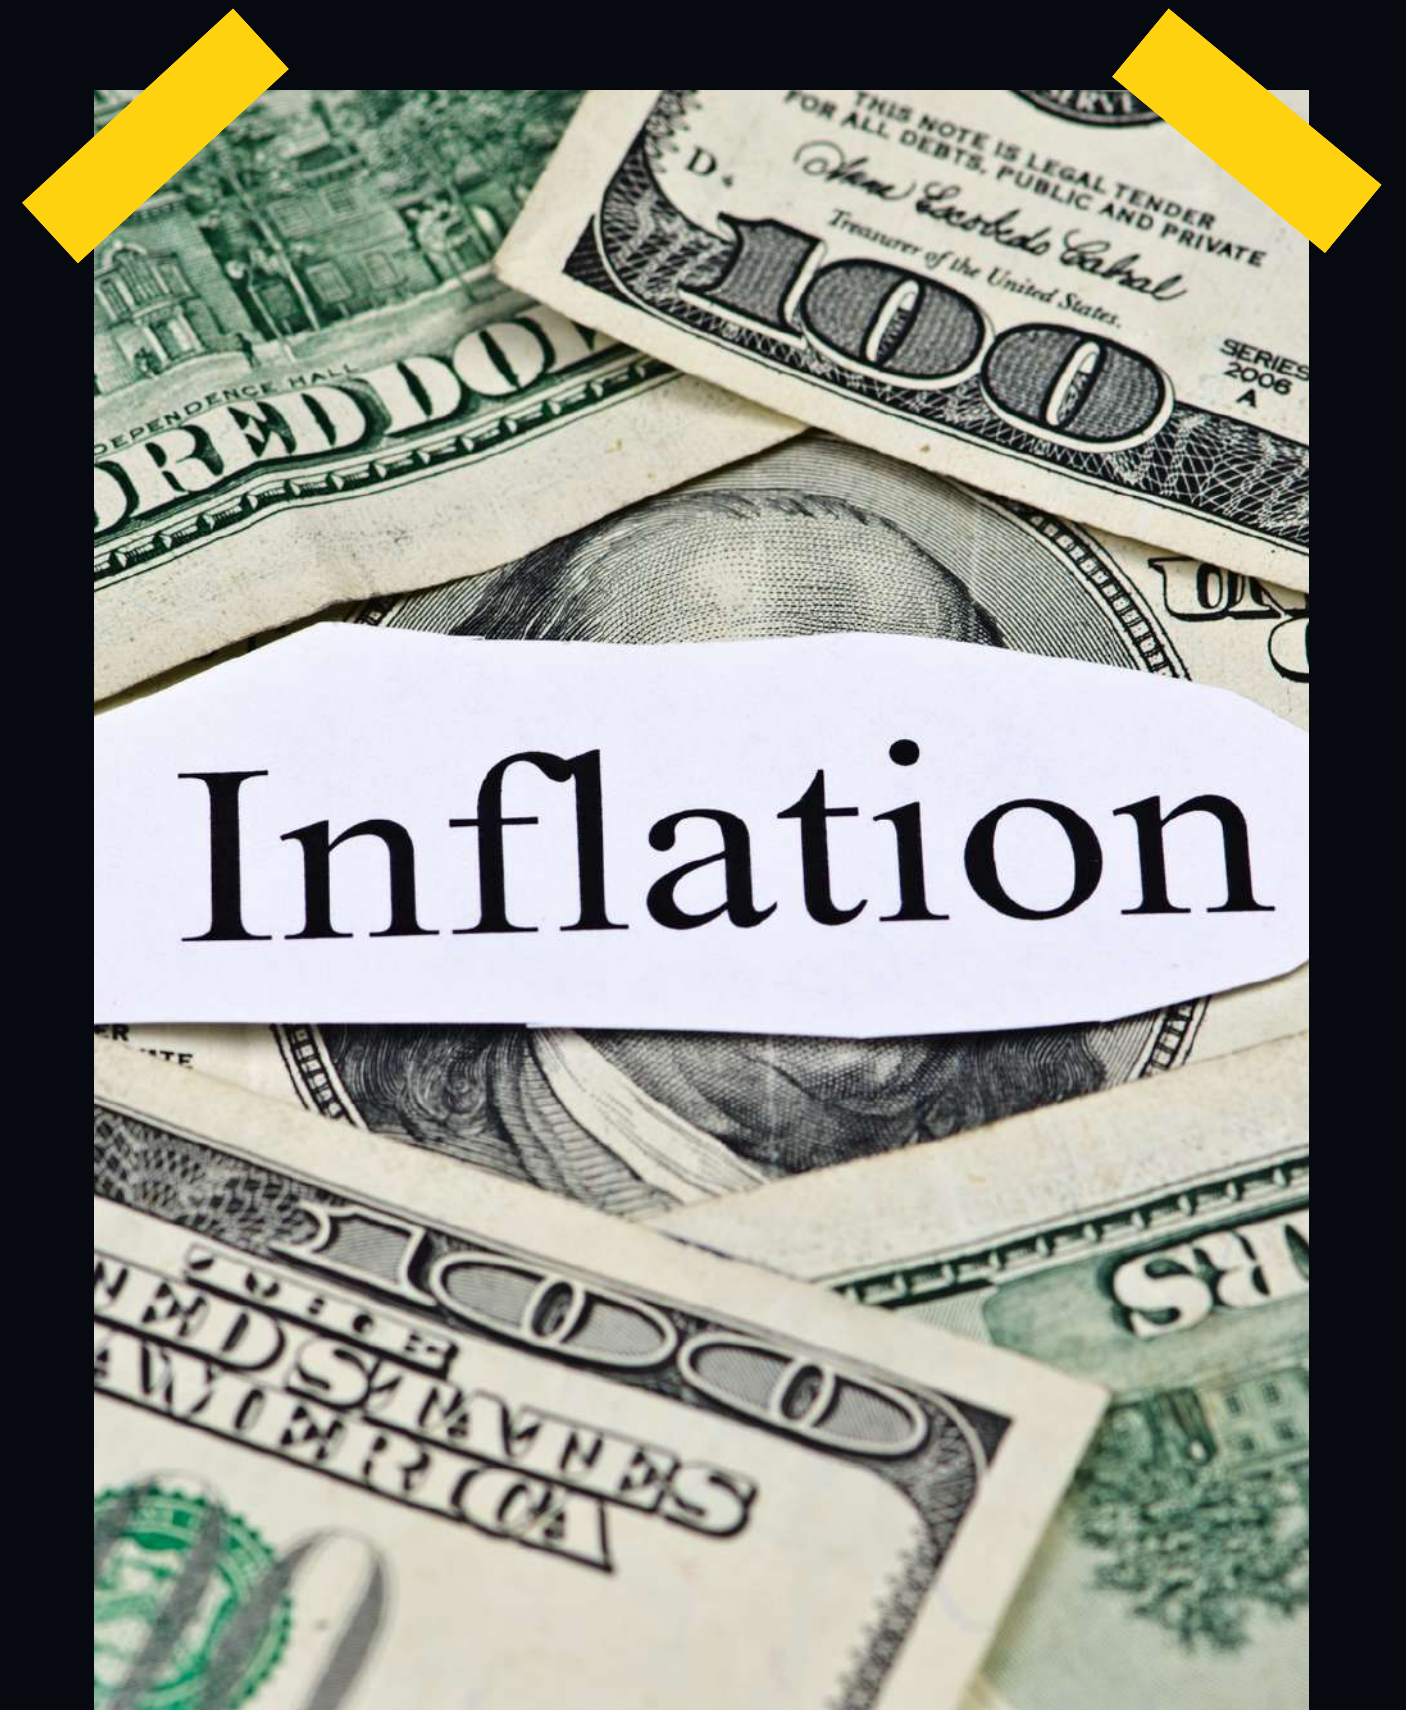

For every product/service/property sold under Our Platform, the client is given free limited Lambatoken bought from the market. For every free Lambatoken given, 2x is burnt, this creates value for previous holders while providing liquidity for the digital asset and decreases the total supply, helping to combat inflation.

THE PROBLEM

High Rise in Inflation Rate

The rate of inflation has tripled most things in the market, from gas to food items. We need a solution that can create global value and fight the inflation rate of a particular region, a solution that will encourage and build consumers buying rate irrespective of the inflation rate.

THE SOLUTION

An alternative value from a market that doesn't depend on the economic growth of a particular geographical location, instead will be dependent on the law of scarcity, supply and demand from a global perspective.

The Law of Scarcity simply states: If what we desire “appears” to be in limited supply, the perception of its value increases significantly. While, a decrease in supply of a product with constant demand, prices tend to rise to a higher equilibrium.

GET FREE LAMBATOKENS

1

You buy our tokenized products/services, you get the physical product/service while we reward you with some tokens bought from the market (in form of cash back) giving you value from both the primary (the product/service) and secondary (the globally traded market) market.

TOKEN BUYBACK

2

We sacrifice our commissions to buy tokens from the market so we can issue as incentives on our tokenized products and services

TOKEN BURNING

3

For every 1 token given for free, 2 is burnt until we have successfully burnt out 1million from the 4.5million total supply. This will help to hedge price of the tokens and it creates value for previous holders while providing liquidity for the digital asset and decreases the total supply, helping to combat inflation.

22.2% TOKEN BURN

4

We plan to burn until 77.8% (i.e. 3,500,000LBT) of the total supply is left in the market. So about 22.2% of Lambatoken will be burnt from the circulating supply and finally total supply.
